

CMPE408 Final Project

Görkem Altunay 114200063

Our aim is to make simple grocery store shopping app for local grocery center. App will have 4 to 5 layouts depending on the external libraries we will use. We are hoping to use Google Maps for the delivery address, Mail intent for the confirmation of shopping and SQLite for recording customer accounts. Here is an little example for user login screen and lists of products to sell.
